

## StarMine's Top U.S. Analyst Performances of 2001

[Back to home page](#)

StarMine, the leading provider of objective ratings of equity securities analysts, is pleased to announce the results of its 2001 annual survey of analyst performance. StarMine tracks every earnings estimate, revision, and stock recommendation published in the Thomson Financial First Call database. Analysts are measured on the return of their stock recommendations and the accuracy of their earnings estimates.

The 2001 survey features four categories of winners:

- ▶ [Overall Top 10 Analysts for Stock Picking](#)
- ▶ [Overall Top 10 Analysts for Earnings Estimate Accuracy](#)
- ▶ [By Industry, the Top 3 Analysts for Stock Picking](#)
- ▶ [By Industry, the Top 3 Analysts for Earnings Estimate Accuracy](#)

For details on StarMine's performance metrics, please [click here](#).

### The Top 10 Stock Pickers

StarMine's proprietary Value Add metric evaluates an analyst's portfolio performance and makes it possible to compare analysts' stock recommendation performance across disparate industries. The following analysts demonstrated the highest Value Add of all the analysts in our database in 2001:

Rank	Analyst	Firm	Industries
1	Houck, Joel	A.G. Edwards	Diversified financial
2	Maher, Bryan	Credit Lyonnais	Lodging, Real estate
3	Gieber, Gregory	A.G. Edwards	Industrial services, Tech services
4	Paris, Alexander	Barrington Research	Consumer services, Industrial services
5	Schutz, James	Stephens, Inc.	Banks
6	Baugh, John	Wachovia Securities	Furnishings
7	Gillespie, Gene	Howard, Weil, Labouisse	Oil companies
8	Weintraub, Mark	Goldman Sachs	Paper products, Forest products
9	Schmitt, William	CIBC World Markets	Casinos
10	Buckley, Joseph	Bear Stearns	Restaurants

StarMine first computes an analyst's "Active Return" by simulating a portfolio that invests \$1000 in each Buy and \$2000 in each Strong Buy, shorts \$1000 for each Sell and Strong Sell, and places \$1000 in cash for each Hold. A benchmark "Coverage Return" is calculated simulating a portfolio that invests equal dollar amounts in all of the stocks in the analyst's coverage. Portfolios are rebalanced at the beginning of each month and when an analyst adds or drops coverage. The difference between the Active Return and the Coverage Return determines the analyst's Value Add. To qualify for this ranking, an analyst had to actively cover at least 9 stocks throughout calendar year 2001.

### The Top 10 Most Accurate Earnings Estimators

StarMine's Relative Accuracy Score (RAS) calculates the accuracy of earnings estimates. It takes into account the analyst's absolute forecast error, the analyst's errors compared to other analysts, the variance of analyst estimates, the timeliness of the analyst's forecasts and revisions, and the magnitude of the actual earnings. The following analysts demonstrated the highest RAS of all the analysts in our database in 2001:

Rank	Analyst	Firm	Industries
1	Cheng, Paul Y	Lehman Brothers	Oil Companies
2	Weintraub, Mark	Goldman Sachs	Paper Products, Cont. & Packaging, Forest Products
3	Bradley, David	J.P. Morgan	Auto Parts, Autos
4	Coldwell, Eric W	Prudential Securities	Biotechnology
5	Adelman, David	Morgan Stanley	Food Products, Tobacco
6	Goldwasser, Alissa	William Blair & Co.	Broadcasting
7	Cristinziano, M	Gerard Klauer Mattison	Communications Technology, Software, Internet
8	Huber, Craig	Morgan Stanley	Publishing
9	Parker, Jim	Raymond James	Airlines
10	McManus, John J	Needham & Company	Electrical Equipment

To qualify for this ranking, an analyst must have covered at least 5 stocks for at least 75% of the periods in calendar year 2001.

Wireless Communications	1	Murtaugh, Jennifer A	Wachovia Securities

2	Power, William V	Robert W. Baird & Company
3	Yanis, Steven R	Banc Of America Securities

StarMine uses the Dow Jones industry classification scheme. To be ranked, an analyst must have maintained active recommendations for at least 5 stocks (or 1/3 of the stocks in the industry for industries with fewer than 15 stocks) for 100 percent of calendar year 2001. Industry returns are computed by simulating a portfolio that invests \$1000 in each Buy and \$2000 in each Strong Buy, shorts \$1000 for each Sell and Strong Sell, and places \$1000 in cash for each Hold. Portfolios are rebalanced at the beginning of each month and when an analyst adds or drops coverage.
